THE EVOLUTION OF CAMERAS

1980s

HANDHELD DIGITAL CAMERA

Heavy cameras designed for handheld use, capturing high-quality images for personal or professional photography.

1991

FIRST WEBCAM

Early camera devices used for video communication over the internet, initially for basic video chats.

2000s

COMPACT DIGITAL CAMERA

Small and lightweight digital cameras with built-in lenses, offering improved image quality and portability.

THE EVOLUTION OF STORAGE DEVICES

1801

PUNCH CARDS

Early data storage method using perforated cards, popular in early computing for programming and data input.

1970

VHS TAPES

Analog video cassette tape format widely used for home entertainment, recording television shows, and playing movies.

1970

FLOPPY DISKS

Portable magnetic storage disks, initially with large sizes and later evolving into smaller, flexible versions for data transfer.
